

Unggi Lee

DGIST, Real-Time Computing Lab · Daegu, South Korea
logg72@dgist.ac.kr / unggi.github.io / Google Scholar

Education

- **M.S. in Computer Science**, DGIST — Feb 2026 – Feb 2028 (expected)
 - Real-Time Computing Lab (RTCL)
 - **B.S. in Electrical Engineering and Computer Science**, DGIST — Feb 2020 – Feb 2026
 - GPA 3.82 / 4.30
-

Research experience

- **Graduate Research Assistant**, Real-Time Computing Lab (RTCL), DGIST — Feb 2026 – Present
 - Real-time systems, with a focus on DNN inference offloading between edge devices and servers under latency constraints
 - Image-adaptive JPEG compression: per-image quality factor and quantization table optimization for offloaded inference under variable network bandwidth
 - **Undergraduate Group Research Program (UGRP)**, DGIST — 2024
 - *Noise Map-Driven Dynamic Frame Processing for Improved Object Detection in Low-Light Conditions* (team research project)
 - Built a low-light detection pipeline in front of YOLO — Zero-DCE enhancement, CBDNet noise-map estimation, and MFDNet denoising — integrated into the detector's data loader
 - Held the pipeline to real time by exploiting temporal redundancy between frames, processing one frame in five at 20 FPS
 - Improved mAP by roughly 1% over the unenhanced baseline on BDD100k
-

International experience

- **Summer Session**, University of California, Los Angeles (UCLA) — Jun – Aug 2023
-

Skills

- **Languages** — C/C++, Python
- **Machine learning** — PyTorch
- **Computer vision** — OpenCV
- **Tools** — Docker, Linux, Git

Publications

1. **WardrobeRL: Prompt-Aware Reinforcement Learning Based Top-Bottom Recommendation**
